

## Do you have sufficient in-house expertise?

For small-to-medium size organizations, building in-house expertise can be cost-prohibitive. Securewise, offers two programs to ensure that your organization can afford to develop and implement your privacy strategy.

### Security Co-Sourcing Program

- Have access to highly qualified experts without any staffing or training overhead
- Retain our team of experts for a number of days per week to develop and manage a security program
- Complements your current resources
- Free phone support around the clock in case of emergencies
- Fast-track reliable solutions to meet your eBusiness strategies

### Co-Sourcing vs Outsourcing

- Allows you to augment your staff where needed instead of giving away everything
- Less expensive than outsourcing
- More manageable and better control
- Build in-house expertise
- Better accountability
- More responsive

## Are you concerned about the privacy of your patient records?

Network security is not just about protecting information assets; it's about good business. A smart organization does not view security as an overhead, but as a business enabler. A secure network enables your organization to conduct business with more community partners and customers over the Internet. A well-designed secure network can improve employee productivity and provide a measure of liability protection.

Organizations like yours may have eBusiness requirements that include:

- **Protecting the privacy and integrity of your corporate resources**
- **Conducting business transactions with community partners over the Internet**
- **Providing access to mission-critical applications using Web technology**
- **Maintaining high level of critical system availability**
- **Conducting secure credit card and other business transactions over the Internet**

Because of the complexity of developing and managing eBusiness solutions, many organizations find that they lack the necessary level of affordable expertise. Moreover, security is multidisciplinary; it requires expertise in a variety of technologies, thus requiring a large team to provide the necessary expertise. As a result, in-house solutions generally require a heavy investment to either train current staff or recruit specialized personnel.

### Proactive, Reactive and Consulting Services

Securewise's *Security Co-sourcing Service* fills your organization's "security knowledge gap". As your security partner, you will have access to highly qualified experts without any staffing or training overhead.

#### Our Co-sourcing services provide experts who can:

- **Make assessments.** Assess an organization's security, communications, or eBusiness requirements.
- **Select technology.** Know which technologies ensure the best solutions, specifically tailored for your organization's needs.
- **Deploy equipment.** Install and configure the necessary equipment, where needed.
- **Develop secure Web applications.** Implement the necessary security measurements before deploying critical Internet/Intranet applications.
- **Integrate and test.** Make sure new solutions will work with the existing network.
- **Handle emergencies.** Know how to contain problems and minimize damage in the event of a security breach.
- **Review changes.** Ensure that any changes you propose will have no negative impact on security or performance.
- **Keep solutions up-to-date.** Proactively upgrade infrastructure or suggest other improvements.
- **Warn of new threats; keep you informed of new technologies or services; help scale solutions.**
