

# Securewise

## Selected Consulting Engagements

- Developed a strategy for a Directory Services and Role-Based Access Control for a large hospital, which included design issues, security and RBAC, Directory Based Resource Provisioning, reference architecture, product recommendations and budgetary pricing.
- Developed an Enterprise Information Portal, Web SSO, web-enabling and data integration framework for a large healthcare organization.
- Developed detailed directory architecture and transition plan that covered integration of distributed systems including mail, human resources, registration, NOS directories, and business application directories for a major healthcare organization.
- Conducted a site security assessment, penetration testing and security architecture recommendations for several organizations.
- Facilitated an Identity Management workshop for a financial organization, which included a methodology to create and manage User and Account Lifecycles.
- Provided consulting services to a software manufacturer on embedded application security features.
- Designed and implemented a security infrastructure for a regional government, school board and libraries to share information.
- Designed and implemented a global VPN and Public Key Infrastructure for a manufacturing company.
- Designed and implemented an ISP network for a school board to provide Internet access to students.
- Developed strategy, operational plans, marketing plans and design for a European based ISP.
- Conducted a risk assessment and provided strategic security architecture for several municipal governments, healthcare, financial, media and manufacturing organizations.
- Performed requirement assessment, and developed architecture for a healthcare community LDAP based Provider Director to allow care providers to access patient records across multiple organizations.
- Assisted a service provider with the architecture, evaluation, and design of a directory services infrastructure for a community of interest in healthcare.
- Assisted in the design, deployment and project management of a large service provider network delivering voice, data and Internet services.
- Provided computer forensic analysis and support to a media company after an intrusion.
- Designed and managed the deployment of security architecture for a transportation company for the first electronic-toll highway. The architecture included Firewalls, VPN, PKI, Messaging, Extranet support, Secure Web Access, Intrusion Detection, High Availability and Business Continuity.
- Provided consulting on VPN and PKI architectures to a car parts manufacturer for joining the ANX network.
- Developed a skills matrix, knowledge gap-analysis and a training plan for a financial institution to improve their security knowledge.
- Provided project management for the deployment of full PKI system for the provincial government (one of the largest PKI deployment in North America)
